DETAILED ACTION

Information Disclosure Statement

1. The information disclosure statement filed 5-14-04, partially, fails to comply with 37 CFR 1.98(a)(3) because it does not include a concise explanation of the relevance, as it is presently understood by the individual designated in 37 CFR 1.56(c) most knowledgeable about the content of the information, of each patent listed that is not in the English language. It has been placed in the application file, but the information referred to therein in part has not been considered.

Specification

2. The disclosure is objected to because of the following informalities:

A) A heading for each section has not been included. The Office suggests Applicant to insert a heading in each section of the specification; the section headings are as follows:

Background of the Invention.

Brief Summary of the Invention.

Brief Description of the Drawing(s).

Detailed Description of the Invention

Abstract of the Disclosure.

each of the headings should appear in upper case, without underlining or bold type, as section headings. See MPEP § 601.

B) The recitation “according to the preamble of claim 1 as claimed in main patent no. 102 56 960.6” should be deleted or corrected appropriately by substituting the written description of the preamble of claim 1 in the above patent.

Claim Objections

Art Unit: 2821

3. Claim 1 is objected to because of the following informalities: In claim 1, line 10, after “supplied,” insert --and--; and

in line 11, after “one radiator group” insert --in at least one of said gap-- to clearly distinguish the radiator or radiator groups in at least one of said gap from the radiator or radiator groups of the adjacent gap. Appropriate correction is required.

Claim Rejections - 35 USC § 112

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claims 2-4, 6 and 7 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Re claims 2, 3, 4 and 6, the recitation “the respectively jointly supplied radiators or radiator groups” is not clear. Is “the respectively jointly supplied radiators or radiator groups” refers to the “radiator or radiator groups jointly supplied within the at least one of said gap” or the “radiator or radiator groups in at least one of said gap jointly supplied with one radiator or radiator groups of the adjacent gap”?

Re claim 7, the sentence starting in line 2 “in at least two gaps...” is unclear because it is not clear whether the “at least two gaps” claimed in claim 7 is the same or different that the “at least two gaps” recited in claim 1?

Double Patenting

6. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the “right to exclude” granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed.

Art Unit: 2821

Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

7. Claims 1-7 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-20 of copending Application No. 10/408,780. Although the conflicting claims are not identical, they are not patentably distinct from each other because Applicants' claimed invention of claims 1-7, and the copending Application No. 10/408,780, essentially claim two-dimensional antenna defining at least two vertically running gaps. The only obvious difference between the two application is that the copending Application No. 10/408,780 refers to the at least two vertically running gaps as "at least two columns running vertically" which would have been obvious to the instant application.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Puente Baliarda et al. (US Pub. No. 2004/0145526); Plet et al. (US 6,646,611); Apostolos (US 6,359,599); Miller (US 4,131,896); Shoemaker (US 4,937,585); also teach similar inventive subject matter.
